## 1 CSS Properties:

### 1.1 A

| accent-color | Specifies an accent color for user-interface controls |
| :--- | :--- |
| align-content | Specifies the alignment between the lines inside a flexible container when the items do not <br> use all available space |
| align-items | Specifies the alignment for items inside a flexible container |
| align-self | Specifies the alignment for selected items inside a flexible container |
| all | A shorthand property for all the animation-*properties |
| animation | Specifies a delay for the start of an animation |
| animation-delay | Specifies whether an animation should be played forwards, backwards or in alternate cycles |
| animation-direction | Specifies how long an animation should take to complete one cycle |
| animation-duration | Specifies a style for the element when the animation is not playing (before it starts, after it <br> ends, or both) |
| animation-fill-mode | Specifies the number of times an animation should be played <br> Specifies a name for the @keyframes animation |
| animation-iteration-count |  |
| animation-name | Specifies whether the animation is running or paused <br> animation-play-state |
| animation-timing-function | Specifies the speed curve of an animation |
| aspect-ratio | Specifies preferred aspect ratio of an element |

### 1.2 B

| backdrop-filter | Defines a graphical effect to the area behind an element |
| :--- | :--- |
| backface-visibility | Defines whether or not the back face of an element should be visible when facing the user |
| background | A shorthand property for all the background-*properties |
| background-attachment | Sets whether a background image scrolls with the rest of the page, or is fixed |
| background-blend-mode | Specifies the blending mode of each background layer (color/image) |
| background-clip | Defines how far the background (color or image) should extend within an element |
| background-color | Specifies the background color of an element |
| background-image | Specifies one or more background images for an element |
| background-origin | Specifies the origin position of a background image |
| background-position | Specifies the position of a background image |
| background-position-x | Specifies the position of a background image on $x$-axis |
| background-position-y | Specifies the position of a background image on $y$-axis |
| background-repeat | Sets if/how a background image will be repeated |

حَــامعة
الْمَــنارة
masalawntiuty

| background-size | Specifies the size of the background images |
| :---: | :---: |
| block-size | Specifies the size of an element in block direction |
| border | A shorthand property for border-width, border-style and border-color |
| border-block | A shorthand property for border-block-width, border-block-style and border-block-color |
| border-block-color | Sets the color of the borders at start and end in the block direction |
| border-block-end | A shorthand property for border-block-end-width, border-block-end-style and border-block-end-color |
| border-block-end-color | Sets the color of the border at the end in the block direction |
| border-block-end-style | Sets the style of the border at the end in the block direction |
| border-block-end-width | Sets the width of the border at the end in the block direction |
| border-block-start | A shorthand property for border-block-start-width, border-block-start-style and border-block-start-color |
| border-block-start-color | Sets the color of the border at the start in the block direction |
| border-block-start-style | Sets the style of the border at the start in the block direction |
| border-block-start-width | Sets the width of the border at the start in the block direction |
| border-block-style | Sets the style of the borders at start and end in the block direction |
| border-block-width | Sets the width of the borders at start and end in the block direction |
| border-bottom | A shorthand property for border-bottom-width, border-bottom-style and border-bottomcolor |
| border-bottom-color | Sets the color of the bottom border |
| border-bottom-left-radius | Defines the radius of the border of the bottom-left corner |
| border-bottom-right-radius | Defines the radius of the border of the bottom-right corner |
| border-bottom-style | Sets the style of the bottom border |
| border-bottom-width | Sets the width of the bottom border |
| border-collapse | Sets whether table borders should collapse into a single border or be separated |
| border-color | Sets the color of the four borders |
| border-end-end-radius | Sets the radius of the corner between the block-end and the inline-end sides of the element |
| border-end-start-radius | Sets the radius of the corner between the block-end and the inline-start sides of the element |
| border-image | A shorthand property for all the border-image-*properties |
| border-image-outset | Specifies the amount by which the border image area extends beyond the border box |
| border-image-repeat | Specifies whether the border image should be repeated, rounded or stretched |
| border-image-slice | Specifies how to slice the border image |
| border-image-source | Specifies the path to the image to be used as a border |
| border-image-width | Specifies the width of the border image |
| border-inline | A shorthand property for border-inline-width, border-inline-style and border-inline-color |
| border-inline-color | Sets the color of the borders at start and end in the inline direction |
| border-inline-end | A shorthand property for border-inline-end-width, border-inline-end-style and border-inline-end-color |

حَــامعة انْمَــنارة
meratasurtiliti

| border-inline-end-color | Sets the color of the border at the end in the inline direction |
| :---: | :---: |
| border-inline-end-style | Sets the style of the border at the end in the inline direction |
| border-inline-end-width | Sets the width of the border at the end in the inline direction |
| border-inline-start | A shorthand property for border-inline-start-width, border-inline-start-style and border-inline-start-color |
| border-inline-start-color | Sets the color of the border at the start in the inline direction |
| border-inline-start-style | Sets the style of the border at the start in the inline direction |
| border-inline-start-width | Sets the width of the border at the start in the inline direction |
| border-inline-style | Sets the style of the borders at start and end in the inline direction |
| border-inline-width | Sets the width of the borders at start and end in the inline direction |
| border-left | A shorthand property for all the border-left-*properties |
| border-left-color | Sets the color of the left border |
| border-left-style | Sets the style of the left border |
| border-left-width | Sets the width of the left border |
| border-radius | A shorthand property for the four border-*-radius properties |
| border-right | A shorthand property for all the border-right-*properties |
| border-right-color | Sets the color of the right border |
| border-right-style | Sets the style of the right border |
| border-right-width | Sets the width of the right border |
| border-spacing | Sets the distance between the borders of adjacent cells |
| border-start-end-radius | Sets the radius of the corner between the block-start and the inline-end sides of the element |
| border-start-start-radius | Sets the radius of the corner between the block-start and the inline-start sides of the element |
| border-style | Sets the style of the four borders |
| border-top | A shorthand property for border-top-width, border-top-style and border-top-color |
| border-top-color | Sets the color of the top border |
| border-top-left-radius | Defines the radius of the border of the top-left corner |
| border-top-right-radius | Defines the radius of the border of the top-right corner |
| border-top-style | Sets the style of the top border |
| border-top-width | Sets the width of the top border |
| border-width | Sets the width of the four borders |
| bottom | Sets the elements position, from the bottom of its parent element |
| box-decoration-break | Sets the behavior of the background and border of an element at page-break, or, for in-line elements, at line-break. |
| box-reflect | The box-reflect property is used to create a reflection of an element. |
| box-shadow | Attaches one or more shadows to an element |
| box-sizing | Defines how the width and height of an element are calculated: should they include padding and borders, or not |

| break-after | Specifies whether or not a page-, column-, or region-break should occur after the specified <br> element |
| :---: | :--- |
| break-before | Specifies whether or not a page-, column-, or region-break should occur before the specified <br> element |
| break-inside | Specifies whether or not a page-, column-, or region-break should occur inside the specified <br> element |

### 1.3 C

| caption-side | Specifies the placement of a table caption |
| :--- | :--- |
| caret-color | Specifies the color of the cursor (caret) in inputs, textareas, or any element that is editable |
| @charset | Specifies the character encoding used in the style sheet |
| clear | Specifies what should happen with the element that is next to a floating element |
| clip | Clips an absolutely positioned element |
| clip-path | Clips an element to a basic shape or to an SVG source |
| color | Sets the color of text |
| column-count | Specifies the number of columns an element should be divided into |
| column-fill | Specifies how to fill columns, balanced or not |
| column-gap | Specifies the gap between the columns |
| column-rule | A shorthand property for all the column-rule-*properties |
| column-rule-color | Specifies the color of the rule between columns |
| column-rule-style | Specifies the style of the rule between columns |
| column-rule-width | Specifies the width of the rule between columns |
| column-span | Specifies how many columns an element should span across |
| column-width | Specifies the column width |
| columns | A shorthand property for column-width and column-count |
| content | Used with the :before and :after pseudo-elements, to insert generated content |
| counter-increment | Increases or decreases the value of one or more CSS counters |
| counter-reset | Creates or resets one or more CSS counters |
| counter-set | Creates or sets one or more CSS counters |
| cursor | Specifies the mouse cursor to be displayed when pointing over an element |

### 1.4 D

| direction | Specifies the text direction/writing direction |
| :--- | :--- |
| display | Specifies how a certain HTML element should be displayed |

### 1.5 E

empty-cells Specifies whether or not to display borders and background on empty cells in a table
1.6 F

| filter | Defines effects (e.g. blurring or color shifting) on an element before the element is displayed |
| :--- | :--- |
| flex | A shorthand property for the flex-grow, flex-shrink, and the flex-basis properties |
| flex-basis | Specifies the initial length of a flexible item |
| flex-direction | A shorthand property for the flex-direction and the flex-wrap properties |
| flex-flow | Specifies how much the item will grow relative to the rest |
| flex-grow | Specifies how the item will shrink relative to the rest |
| flex-shrink | Specifies whether the flexible items should wrap or not |
| flex-wrap | Specifies whether an element should float to the left, right, or not at all |
| float | A shorthand property for the font-style, font-variant, font-weight, font-size/line-height, and |
| font | A rule that allows websites to download and use fonts other than the "web-safe" fonts |

| font-variant-position | Controls the usage of alternate glyphs of smaller size positioned as superscript or subscript |
| :--- | :--- |
| regarding the baseline of the font |  |

### 1.7 G

| gap | A shorthand property for the row-gap and the column-gap properties |
| :---: | :---: |
| grid | A shorthand property for the grid-template-rows, grid-template-columns, grid-templateareas, grid-auto-rows, grid-auto-columns, and the grid-auto-flow properties |
| grid-area | Either specifies a name for the grid item, or this property is a shorthand property for the grid-row-start, grid-column-start, grid-row-end, and grid-column-end properties |
| grid-auto-columns | Specifies a default column size |
| grid-auto-flow | Specifies how auto-placed items are inserted in the grid |
| grid-auto-rows | Specifies a default row size |
| grid-column | A shorthand property for the grid-column-start and the grid-column-end properties |
| grid-column-end | Specifies where to end the grid item |
| grid-column-gap | Specifies the size of the gap between columns |
| grid-column-start | Specifies where to start the grid item |
| grid-gap | A shorthand property for the grid-row-gap and grid-column-gap properties |
| grid-row | A shorthand property for the grid-row-start and the grid-row-end properties |
| grid-row-end | Specifies where to end the grid item |
| grid-row-gap | Specifies the size of the gap between rows |
| grid-row-start | Specifies where to start the grid item |
| grid-template | A shorthand property for the grid-template-rows, grid-template-columns and gridareas properties |
| grid-template-areas | Specifies how to display columns and rows, using named grid items |
| grid-template-columns | Specifies the size of the columns, and how many columns in a grid layout |
| grid-template-rows | Specifies the size of the rows in a grid layout |

### 1.8 H

| hanging-punctuation | Specifies whether a punctuation character may be placed outside the line box |
| :--- | :--- |
| height | Sets the height of an element |
| hyphens | Sets how to split words to improve the layout of text |
| hypenate-character | Sets the character used at the end of line, before a hyphenation break |

## 1.9

## image-rendering

| @import | Allows you to import a style sheet into another style sheet |
| :--- | :--- |
| inline-size | Specifies the size of an element in the inline direction |
| inset | Specifies the distance between an element and the parent element |
| inset-block | Specifies the distance between an element and the parent element in the block direction <br> Specifies the distance between the end of an element and the parent element in the block <br> inset-block-end <br> direction |
| inset-block-start | Specifies the distance between the start of an element and the parent element in the block <br> direction |
| inset-inline | Specifies the distance between an element and the parent element in the inline direction <br> Specifies the distance between the end of an element and the parent element in the inline <br> direction |
| inset-inline-start | Specifies the distance between the start of an element and the parent element in the inline <br> direction |
| isolation | Defines whether an element must create a new stacking content |

### 1.10 J

| justify-content | Specifies the alignment between the items inside a flexible container when the items do not <br> use all available space |
| :--- | :--- |
| is set on the grid container. Specifies the alignment of grid items in the inline direction |  |
| justify-self | Is set on the grid item. Specifies the alignment of the grid item in the inline direction |

### 1.11 K

@keyframes Specifies the animation code

### 1.12 L

| left | Specifies the left position of a positioned element |
| :--- | :--- |
| letter-spacing | Increases or decreases the space between characters in a text |
| line-break | Specifies how/if to break lines |
| line-height | Sets the line height |
| list-style | Sets all the properties for a list in one declaration |
| list-style-image | Specifies an image as the list-item marker |
| list-style-position | Specifies the position of the list-item markers (bullet points) |
| list-style-type | Specifies the type of list-item marker |

### 1.13 M

| margin | Sets all the margin properties in one declaration |
| :---: | :---: |
| margin-block | Specifies the margin in the block direction |
| margin-block-end | Specifies the margin at the end in the block direction |
| margin-block-start | Specifies the margin at the start in the block direction |
| margin-bottom | Sets the bottom margin of an element |
| margin-inline | Specifies the margin in the inline direction |
| margin-inline-end | Specifies the margin at the end in the inline direction |
| margin-inline-start | Specifies the margin at the start in the inline direction |
| margin-left | Sets the left margin of an element |
| margin-right | Sets the right margin of an element |
| margin-top | Sets the top margin of an element |
| mask | Hides parts of an element by masking or clipping an image at specific places |
| mask-clip | Specifies the mask area |
| mask-composite | Represents a compositing operation used on the current mask layer with the mask layers below it |
| mask-image | Specifies an image to be used as a mask layer for an element |
| mask-mode | Specifies whether the mask layer image is treated as a luminance mask or as an alpha mask |
| mask-origin | Specifies the origin position (the mask position area) of a mask layer image |
| mask-position | Sets the starting position of a mask layer image (relative to the mask position area) |
| mask-repeat | Specifies how the mask layer image is repeated |
| mask-size | Specifies the size of a mask layer image |
| mask-type | Specifies whether an SVG <mask> element is treated as a luminance mask or as an alpha mask |
| max-height | Sets the maximum height of an element |
| max-width | Sets the maximum width of an element |
| @media | Sets the style rules for different media types/devices/sizes |
| max-block-size | Sets the maximum size of an element in the block direction |
| max-inline-size | Sets the maximum size of an element in the inline direction |
| min-block-size | Sets the minimum size of an element in the block direction |
| min-inline-size | Sets the minimum size of an element in the inline direction |
| min-height | Sets the minimum height of an element |
| min-width | Sets the minimum width of an element |
| mix-blend-mode | Specifies how an element's content should blend with its direct parent background |

### 1.14

| object-fit | Specifies how the contents of a replaced element should be fitted to the box established by its used height and width |
| :---: | :---: |
| object-position | Specifies the alignment of the replaced element inside its box |
| offset | Is a shorthand, and specifies how to animate an element along a path |
| offset-anchor | Specifies a point on an element that is fixed to the path it is animated along |
| offset-distance | Specifies the position along a path where an animated element is placed |
| offset-path | Specifies the path an element is animated along |
| offset-rotate | Specifies rotation of an element as it is animated along a path |
| opacity | Sets the opacity level for an element |
| order | Sets the order of the flexible item, relative to the rest |
| orphans | Sets the minimum number of lines that must be left at the bottom of a page or column |
| outline | A shorthand property for the outline-width, outline-sty/e, and the outline-color properties |
| outline-color | Sets the color of an outline |
| outline-offset | Offsets an outline, and draws it beyond the border edge |
| outline-style | Sets the style of an outline |
| outline-width | Sets the width of an outline |
| overflow | Specifies what happens if content overflows an element's box |
| overflow-anchor | Specifies whether or not content in viewable area in a scrollable contianer should be pushed down when new content is loaded above |
| overflow-wrap | Specifies whether or not the browser can break lines with long words, if they overflow the container |
| overflow-x | Specifies whether or not to clip the left/right edges of the content, if it overflows the element's content area |
| overflow-y | Specifies whether or not to clip the top/bottom edges of the content, if it overflows the element's content area |
| overscroll-behavior | Specifies whether to have scroll chaining or overscroll affordance in $x$ - and $y$-directions |
| overscroll-behavior-block | Specifies whether to have scroll chaining or overscroll affordance in the block direction |
| overscroll-behavior-inline | Specifies whether to have scroll chaining or overscroll affordance in the inline direction |
| overscroll-behavior-x | Specifies whether to have scroll chaining or overscroll affordance in $x$-direction |
| overscroll-behavior-y | Specifies whether to have scroll chaining or overscroll affordance in $y$-directions |

### 1.15 P

| padding | A shorthand property for all the padding-* properties |
| :--- | :--- |
| padding-block | Specifies the padding in the block direction |
| padding-block-end | Specifies the padding at the end in the block direction |

| padding-block-start | Specifies the padding at the start in the block direction |
| :--- | :--- |
| padding-bottom | Sets the bottom padding of an element |
| padding-inline | Specifies the padding in the inline direction |
| padding-inline-end | Specifies the padding at the end in the inline direction |
| padding-inline-start | Specifies the padding at the start in the inline direction |
| padding-left | Sets the left padding of an element |
| padding-right | Sets the right padding of an element |
| padding-top | Sets the top padding of an element |
| page-break-after | Sets the page-break behavior after an element |
| page-break-before | Sets the page-break behavior before an element |
| page-break-inside | Sets the page-break behavior inside an element |
| paint-order | Sets the order of how an SVG element or text is painted. |
| perspective | Gives a 3D-positioned element some perspective |
| perspective-origin | Defines at which position the user is looking at the 3D-positioned element |
| place-content | Specifies align-content and justify-content property values for flexbox and grid layouts |
| place-items | Specifies align-items and justify-items property values for grid layouts |
| place-self | Specifies align-self and justify-self property values for grid layouts |
| pointer-events | Defines whether or not an element reacts to pointer events |
| position | Specifies the type of positioning method used for an element (static, relative, absolute or |

### 1.16 Q

```
quotes
Sets the type of quotation marks for embedded quotations
```

### 1.17 R

| resize | Defines if (and how) an element is resizable by the user |
| :--- | :--- |
| right | Specifies the right position of a positioned element |
| rotate | Specifies the rotation of an element |
| row-gap | Specifies the gap between the grid rows |

### 1.18 S

| scale | Specifies the size of an element by scaling up or down |
| :--- | :--- |
| scroll-behavior | Specifies whether to smoothly animate the scroll position in a scrollable box, instead of a <br> straight jump |
| scroll-margin | Specifies the margin between the snap position and the container |
| scroll-margin-block | Specifies the margin between the snap position and the container in the block direction |

حَــامعة النَـــنـارة

| scroll-margin-block-end | Specifies the end margin between the snap position and the container in the block direction |
| :--- | :--- |
| scroll-margin-block-start | Specifies the start margin between the snap position and the container in the block direction |
| scroll-margin-bottom | Specifies the margin between the snap position on the bottom side and the container |
| scroll-margin-inline | Specifies the margin between the snap position and the container in the inline direction |
| scroll-margin-inline-end | Specifies the end margin between the snap position and the container in the inline direction |
| scroll-margin-inline-start | Specifies the start margin between the snap position and the container in the inline direction |
| scroll-margin-left | Specifies the margin between the snap position on the left side and the container |
| scroll-margin-right | Specifies the margin between the snap position on the right side and the container |
| scroll-margin-top | Specifies the distance from the container to the snap position on the child elements |

### 1.19 T

| tab-size | Specifies the width of a tab character |
| :--- | :--- |
| table-layout | Defines the algorithm used to lay out table cells, rows, and columns |
| text-align | Specifies the horizontal alignment of text |

| text-align-last | Describes how the last line of a block or a line right before a forced line break is aligned when text-align is "justify" |
| :---: | :---: |
| text-combine-upright | Specifies the combination of multiple characters into the space of a single character |
| text-decoration | Specifies the decoration added to text |
| text-decoration-color | Specifies the color of the text-decoration |
| text-decoration-line | Specifies the type of line in a text-decoration |
| text-decoration-style | Specifies the style of the line in a text decoration |
| text-decoration-thickness | Specifies the thickness of the decoration line |
| text-emphasis | A shorthand property for the text-emphasis-style and text-emphasis-color properties |
| text-emphasis-color | Specifies the color of emphasis marks |
| text-emphasis-position | Specifies the position of emphasis marks |
| text-emphasis-style | Specifies the style of emphasis marks |
| text-indent | Specifies the indentation of the first line in a text-block |
| text-justify | Specifies the justification method used when text-align is "justify" |
| text-orientation | Defines the orientation of characters in a line |
| text-overflow | Specifies what should happen when text overflows the containing element |
| text-shadow | Adds shadow to text |
| text-transform | Controls the capitalization of text |
| text-underline-offset | Specifies the offset distance of the underline text decoration |
| text-underline-position | Specifies the position of the underline text decoration |
| top | Specifies the top position of a positioned element |
| transform | Applies a 2D or 3D transformation to an element |
| transform-origin | Allows you to change the position on transformed elements |
| transform-style | Specifies how nested elements are rendered in 3D space |
| transition | A shorthand property for all the transition-*properties |
| transition-delay | Specifies when the transition effect will start |
| transition-duration | Specifies how many seconds or milliseconds a transition effect takes to complete |
| transition-property | Specifies the name of the CSS property the transition effect is for |
| transition-timing-function | Specifies the speed curve of the transition effect |
| translate | Specifies the position of an element |

### 1.20 U

| unicode-bidi | Used together with the direction property to set or return whether the text should be <br> overridden to support multiple languages in the same document |
| :--- | :--- |
| user-select | Specifies whether the text of an element can be selected |

### 1.21 V

| vertical-align | Sets the vertical alignment of an element |
| :--- | :--- |
| visibility | Specifies whether or not an element is visible |

### 1.22 W

| white-space | Specifies how white-space inside an element is handled |
| :--- | :--- |
| widows | Sets the minimum number of lines that must be left at the top of a page or column |
| width | Sets the width of an element |
| word-break | Specifies how words should break when reaching the end of a line |
| word-spacing | Increases or decreases the space between words in a text |
| word-wrap | Allows long, unbreakable words to be broken and wrap to the next line |
| writing-mode | Specifies whether lines of text are laid out horizontally or vertically |

### 1.23 Z

z-index
Sets the stack order of a positioned element

## 2 CSS Selector Reference:

| Selector | Example | Example description |
| :--- | :--- | :--- |
| .class | .intro | Selects all elements with class="intro" |
| class1.class2 | .name1.name2 | Selects all elements with both name1 and name2 set within its class attribute |
| class1 .class2 | .name1 .name2 | Selects all elements with name2 that is a descendant of an element with name1 |
| \#id | \#firstname | Selects the element with id="firstname" |
| * | * | Selects all elements |
| element | p | Selects all <p> elements |
| element.class | p.intro | Selects all <p> elements with class="intro" |
| element,element | div, p | Selects all <div> elements and all <p> elements |
| element element | div p | Selects all <p> elements inside <div> elements |
| element>element | div >p | Selects all <p> elements where the parent is a <div> element |
| element+element | div +p | Selects the first <p> element that is placed immediately after <div> elements |
| element1~element2 | p ~ ul | Selects every <ul> element that is preceded by a <p> element |
| [attribute] | [target] | Selects all elements with a target attribute |
| [attribute=value] | [target="_blank"] | Selects all elements with target="_blank" |
| [attribute~=value] | [title~="flower"] | Selects all elements with a title attribute containing the word "flower" |

| [attribute\|=value] | [lang\|="en"] | Selects all elements with a lang attribute value equal to "en" or starting with "en- |
| :---: | :---: | :---: |
| [attribute^=value] | $a[h r e f \wedge=$ "https"] | Selects every <a> element whose href attribute value begins with "https" |
| [attribute $\$=$ value] | a[href\$=".pdf"] | Selects every <a> element whose href attribute value ends with ".pdf" |
| [attribute*=value] | a[href*="w3schools"] | Selects every <a> element whose href attribute value contains the substring "w3schools" |
| :active | a:active | Selects the active link |
| ::after | p::after | Insert something after the content of each <p> element |
| : $:$ before | $p:$ :before | Insert something before the content of each <p> element |
| :checked | input:checked | Selects every checked <input> element |
| :default | input:default | Selects the default <input> element |
| :disabled | input:disabled | Selects every disabled <input> element |
| :empty | p:empty | Selects every <p> element that has no children (including text nodes) |
| :enabled | input:enabled | Selects every enabled <input> element |
| :first-child | p:first-child | Selects every <p> element that is the first child of its parent |
| ::first-letter | $p$ ::first-letter | Selects the first letter of every < $p$ > element |
| ::first-line | $p$ ::first-line | Selects the first line of every <p> element |
| :first-of-type | p:first-of-type | Selects every <p> element that is the first <p> element of its parent |
| :focus | input:focus | Selects the input element which has focus |
| :fullscreen | :fullscreen | Selects the element that is in full-screen mode |
| :hover | a:hover | Selects links on mouse over |
| : in-range | input:in-range | Selects input elements with a value within a specified range |
| : indeterminate | input:indeterminate | Selects input elements that are in an indeterminate state |
| : invalid | input:invalid | Selects all input elements with an invalid value |
| :lang(language) | p:lang(it) | Selects every <p> element with a lang attribute equal to "it" (Italian) |
| :last-child | p:last-child | Selects every <p> element that is the last child of its parent |
| :last-of-type | p:last-of-type | Selects every <p> element that is the last <p> element of its parent |
| : link | a:link | Selects all unvisited links |
| ::marker | ::marker | Selects the markers of list items |
| :not(selector) | : $\operatorname{not}(\mathrm{p})$ | Selects every element that is not a <p> element |
| :nth-child( $n$ ) | p :nth-child(2) | Selects every < p > element that is the second child of its parent |
| :nth-last-child( $n$ ) | p:nth-last-child(2) | Selects every $\langle\mathrm{p}>$ element that is the second child of its parent, counting from the last child |
| :nth-last-of-type( $n$ ) | p:nth-last-of-type(2) | Selects every <p> element that is the second <p> element of its parent, counting from the last child |
| :nth-of-type( $n$ ) | p:nth-of-type(2) | Selects every <p> element that is the second <p> element of its parent |
| :only-of-type | p:only-of-type | Selects every <p> element that is the only < p > element of its parent |
| :only-child | p:only-child | Selects every < $p$ > element that is the only child of its parent |

| :optional | input:optional | Selects input elements with no "required" attribute |
| :--- | :--- | :--- |
| :out-of-range | input:out-of-range | Selects input elements with a value outside a specified range |
| :"placeholder | input::placeholder | Selects input elements with the "placeholder" attribute specified |
| :read-only | input:read-only | Selects input elements with the "readonly" attribute specified |
| :read-write | input:read-write | Selects input elements with the "readonly" attribute NOT specified |
| :required | input:required | Selects input elements with the "required" attribute specified |
| :root | :root | Selects the document's root element |
| :selection | :selection | Selects the portion of an element that is selected by a user |
| :target | \#news:target | Selects the current active \#news element (clicked on a URL containing that |
|  | anchor name) |  |
| :valid | input:valid | Selects all input elements with a valid value |
| :visited | a:visited | Selects all visited links |

## 3 CSS Functions Reference:

| Function | Description |
| :--- | :--- |
| attr() | Returns the value of an attribute of the selected element |
| calc() | Allows you to perform calculations to determine CSS property values |
| conic-gradient() | Creates a conic gradient |
| counter() | Returns the current value of the named counter |
| cubic-bezier() | Defines a Cubic Bezier curve |
| hsl() | Defines colors using the Hue-Saturation-Lightness model (HSL) |
| hsla() | Defines colors using the Hue-Saturation-Lightness-Alpha model (HSLA) |
| linear-gradient() | Creates a linear gradient |
| max() | Uses the largest value, from a comma-separated list of values, as the property value value, from a comma-separated list of values, as the property value |
| min() | Creates a radial gradient |
| radial-gradient() | Repeats a conic gradient |
| repeating-conic-gradient() | Repeats a linear gradient |
| repeating-linear-gradient() | Repeats a radial gradient |
| repeating-radial-gradient() | Defines colors using the Red-Green-Blue model (RGB) |
| rgb() | Defines colors using the Red-Green-Blue-Alpha model (RGBA) |
| rgba() | Inserts the value of a custom property |
| var() |  |
