# Deflection in Determinate Structures

## Deflections of Trusses, Beams, & Frames: Work-Energy Methods

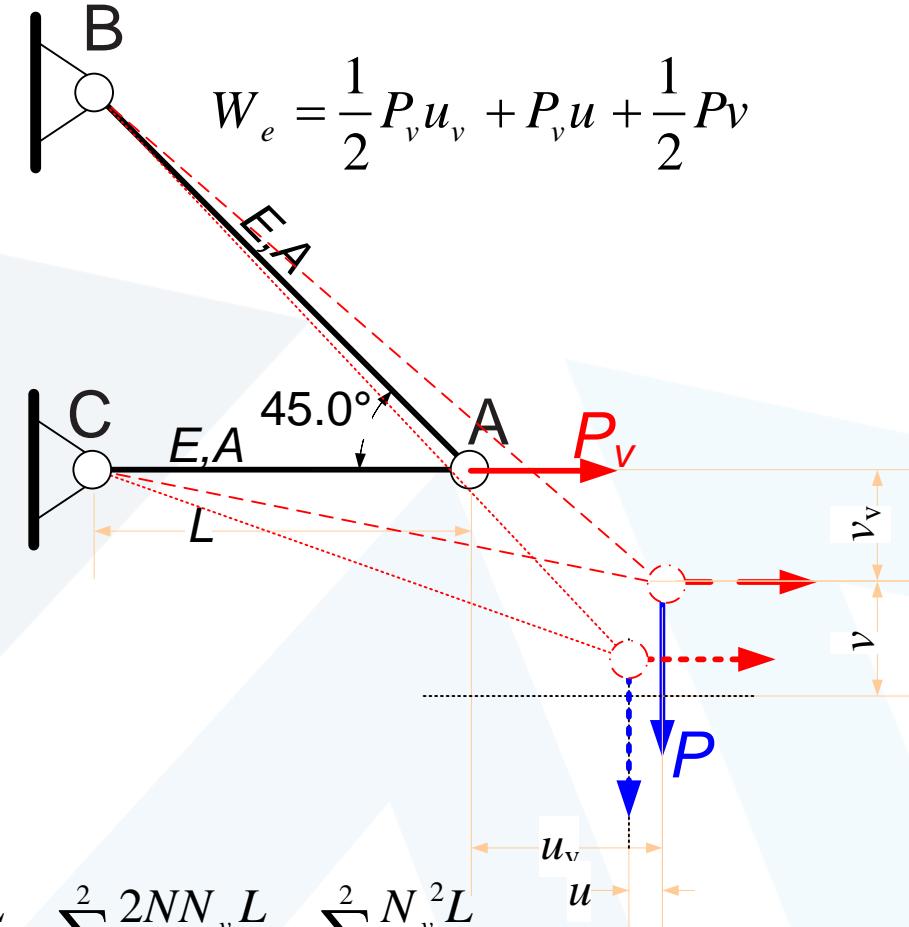

- Deflection of trusses by Work & Strain energy principle
- Principle of Virtual Work
- Deflections of Trusses by the V. W. M.
- Deflections of Beams by the V. W. M.
- Deflections of Frames by the V. W. M.

# Deflections of Trusses by the Virtual Work Method

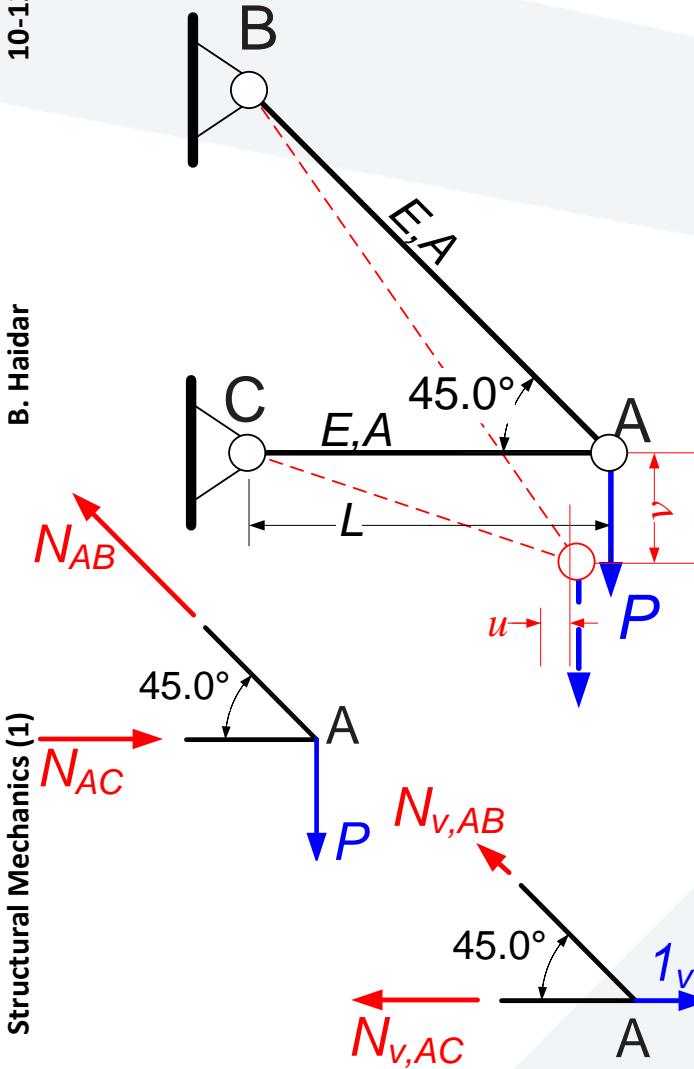

$$U = \sum_{i=1}^2 \frac{(N + N_v)^2 L}{2EA} = \sum_{i=1}^2 \frac{N^2 L}{2EA} + \sum_{i=1}^2 \frac{2NN_v L}{2EA} + \sum_{i=1}^2 \frac{N_v^2 L}{2EA}$$

$$W_e = U \Rightarrow Pv_v = P_v u = \sum_{i=1}^2 \frac{NN_v L}{EA}$$

Making  $P_v = 1$        $(1_v)u = u = \sum_{i=1}^2 \frac{NN_v L}{EA}$

The truss shown in Fig. carries a gradually applied load  $P$  at the joint A. **Compute the horizontal deflection  $u$  at A.**

1) Analyzing the truss under the real load, for  $N$  in the two members. We found

$$N_{AB} = 1.41P(T)$$

$$N_{AC} = P(C)$$

2) Applying a virtual unit load at A in the direction of  $u$ .

Then Analyzing For  $N_v$

Considering the vertical equil. at A:

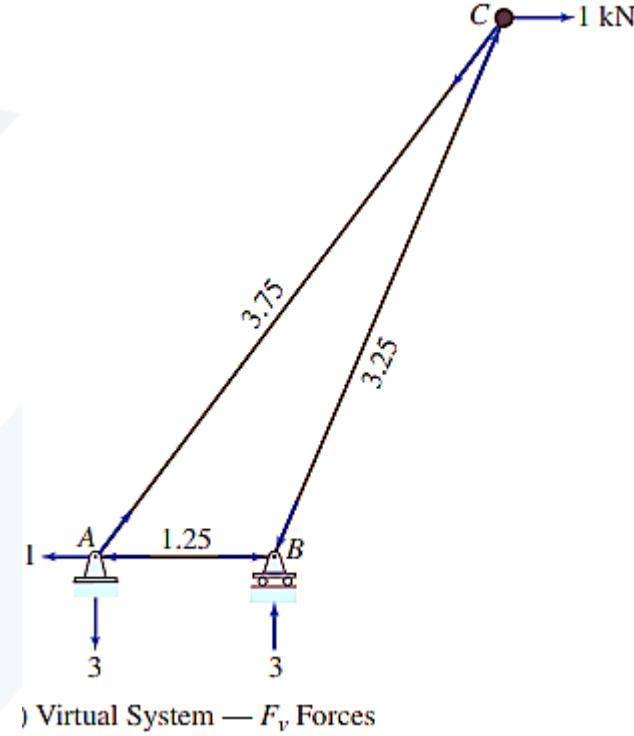

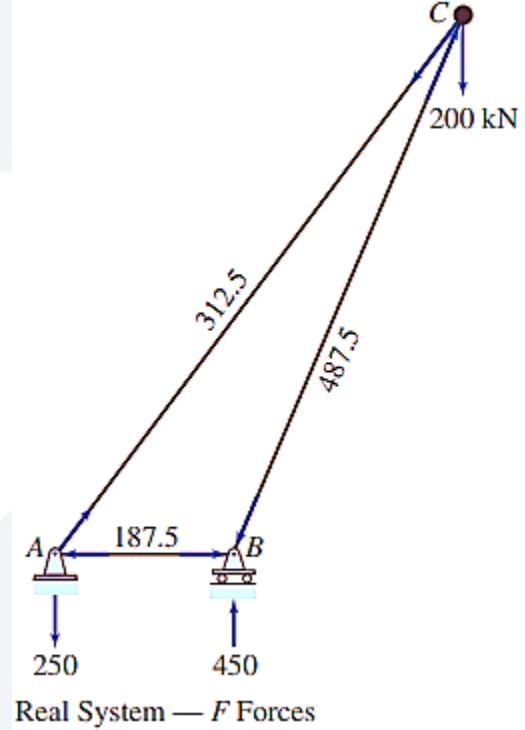

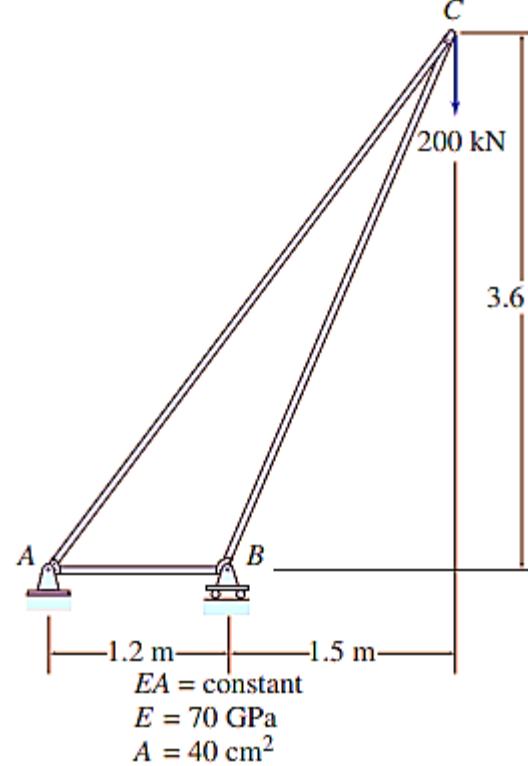

$$N_{v,AB} \cos 45^\circ = 0 \Rightarrow N_{v,AB} = 0$$

Considering the horizontal equil. at A:

$$-N_{v,AC} + 1_v = 0 \Rightarrow N_{v,AC} = 1 (T)$$

3) Applying the V.W.M  $(1_v)u = u = \sum_{i=1}^2 \frac{N N_v L}{EA} = 0 + \frac{(-P)(+1)L}{EA} = \frac{-PL}{EA}$

**Example 01:** Use the virtual work method to determine the horizontal components of the deflection at joint C of the truss shown in the following figure.

**Example 01:** The member axial forces due to the real system ( $N$ ) and this virtual system ( $N_v$ ) are then tabulated as shown in the following table:.

| Member | L<br>(m) | N<br>(kN) | $N_v$<br>(kN) | $N_v(NL)$<br>(kn <sup>2</sup> .m) |
|--------|----------|-----------|---------------|-----------------------------------|
| AB     | 1.2      | -187.5    | -1.25         | 281.25                            |
| AC     | 4.5      | 312.5     | 3.75          | 5273.44                           |
| BC     | 3.9      | -487.5    | -3.25         | 6179.06                           |
|        |          |           |               | <b>11733.75</b>                   |

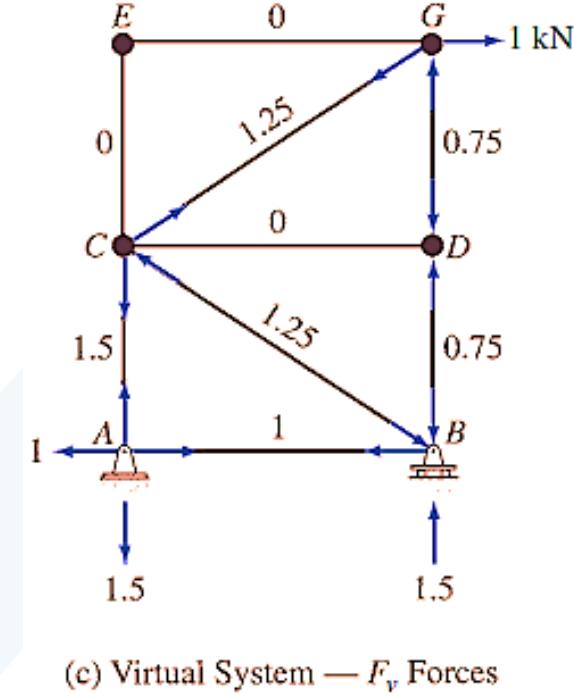

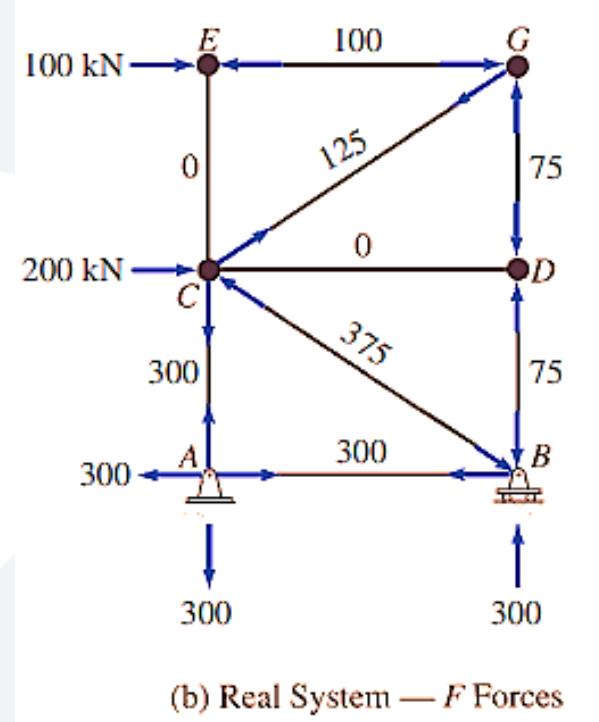

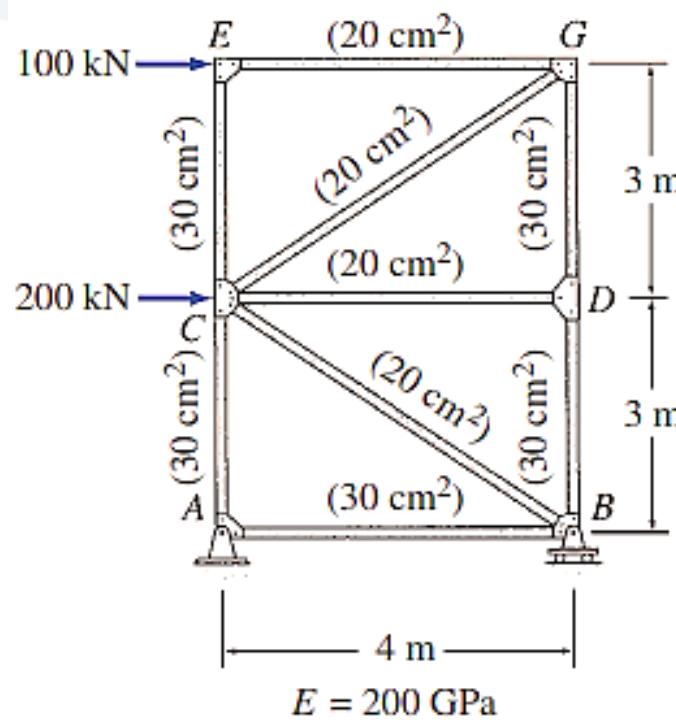

**Example 01:** the virtual work expression is applied to determine  $\Delta_{CH}$  as shown below:

$$1(\Delta_{CH}) = \frac{1}{E} \sum \frac{N_v(NL)}{A}$$

$$(1\text{kN})(\Delta_{CH}) = \frac{11,733.75}{70(10^6)4000(10^{-6})} \text{kN.m}$$
$$\Delta_{CH} = 0.042 \text{ m}$$

$$\Delta_{CH} = 42 \text{ mm} \rightarrow$$

**Example 02:** Use the virtual work method to determine the horizontal components of the deflection at joint G of the truss shown in the following figure.

**Example 02:** The member axial forces due to the real system ( $N$ ) and this virtual system ( $N_{v1}$ ) are then tabulated as shown in the following table:

| Member | L<br>(m) | A<br>(m <sup>2</sup> ) | N<br>(kN) | N <sub>v</sub><br>(kN) | N <sub>v1</sub> (NL/A)<br>(kn <sup>2</sup> /m) |
|--------|----------|------------------------|-----------|------------------------|--|
| AB     | 4        | 0.003                  | 300       | 1                      | 400000   |
| CD     | 4        | 0.002                  | 0         | 0                      | 0  |
| EG     | 4        | 0.002                  | -100      | 0                      | 0  |
| AC     | 3        | 0.003                  | 300       | 1.5                    | 450000   |
| CE     | 3        | 0.003                  | 0         | 0                      | 0  |
| BD     | 3        | 0.003                  | -75       | -0.75                  | 56250  |
| DG     | 3        | 0.003                  | -75       | -0.75                  | 56250  |
| BC     | 5        | 0.002                  | -375      | -1.25                  | 1171875  |
| CG     | 5        | 0.002                  | 125       | 1.25                   | 390625   |
|        |          |                        |           |                        | 2525000  |

**Example 02:** the virtual work expression is applied to determine  $\Delta_{GH}$  as shown below:

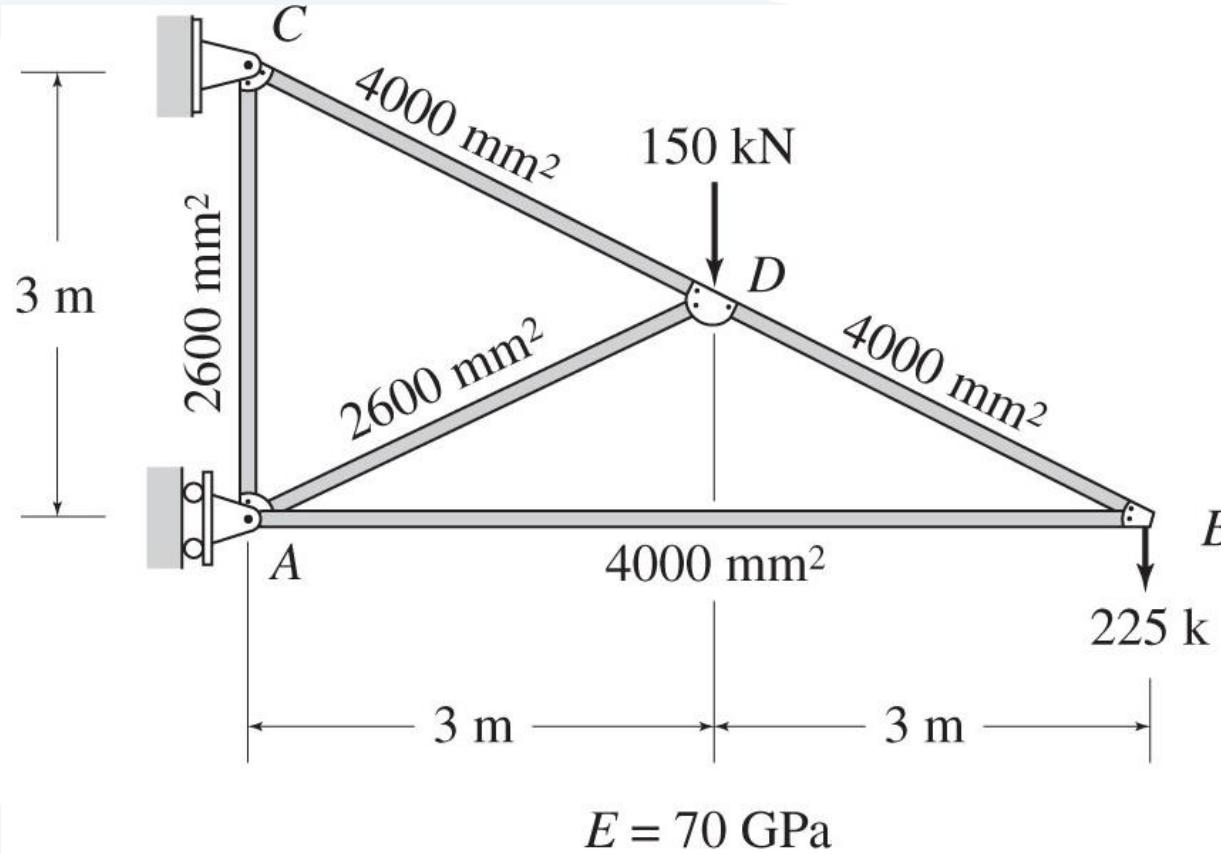

$$1(\Delta_{GH}) = \frac{1}{E} \sum \frac{N_v(NL)}{A}$$

$$(1 \text{ kN})(\Delta_{CH}) = \frac{2525000}{200(10^6)} \text{ kN.m}$$

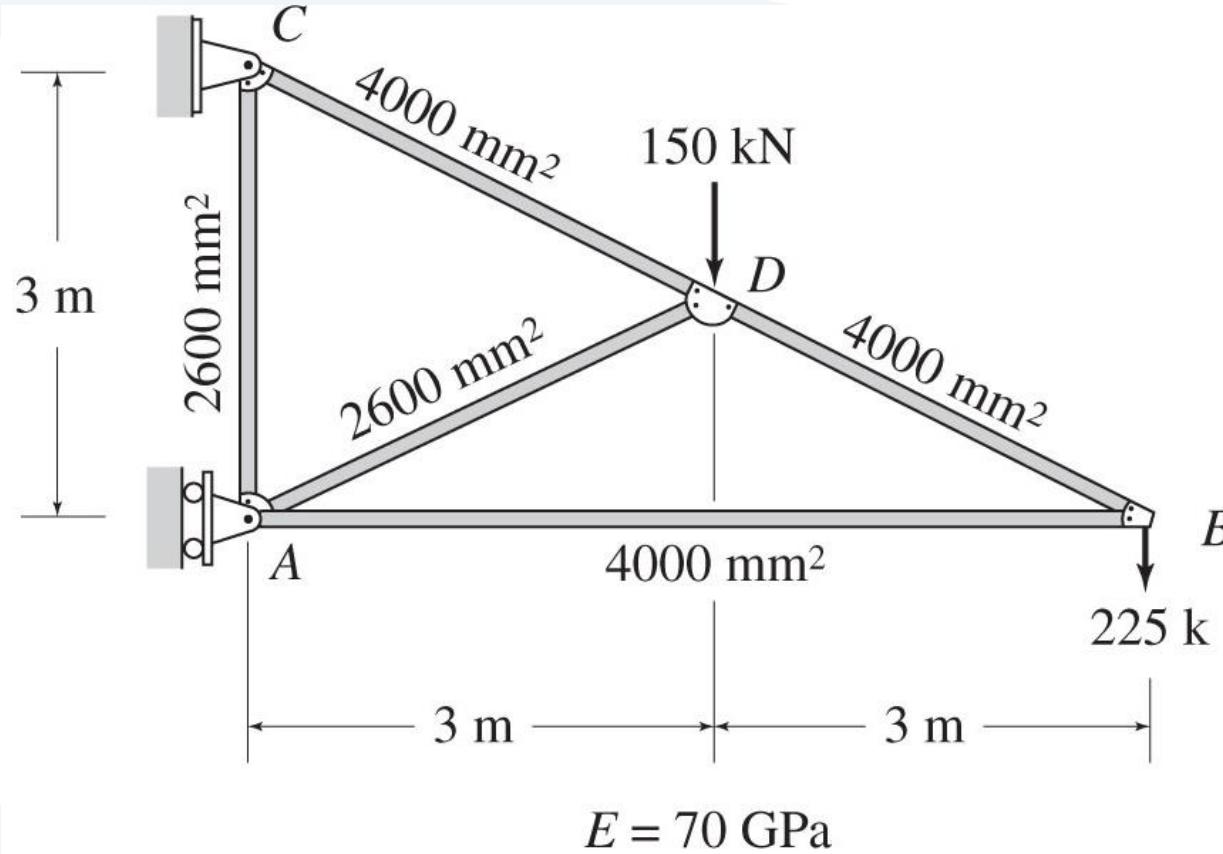

$$\Delta_{GH} = 0.0126 \text{ m}$$

$$\Delta_{GH} = 12.6 \text{ mm} \rightarrow$$

**Example 03:** Use the virtual work method to determine the horizontal and vertical components of the deflection at joint B of the truss shown in the following figure. **Then find the vertical deflection at D without V.U.L.**

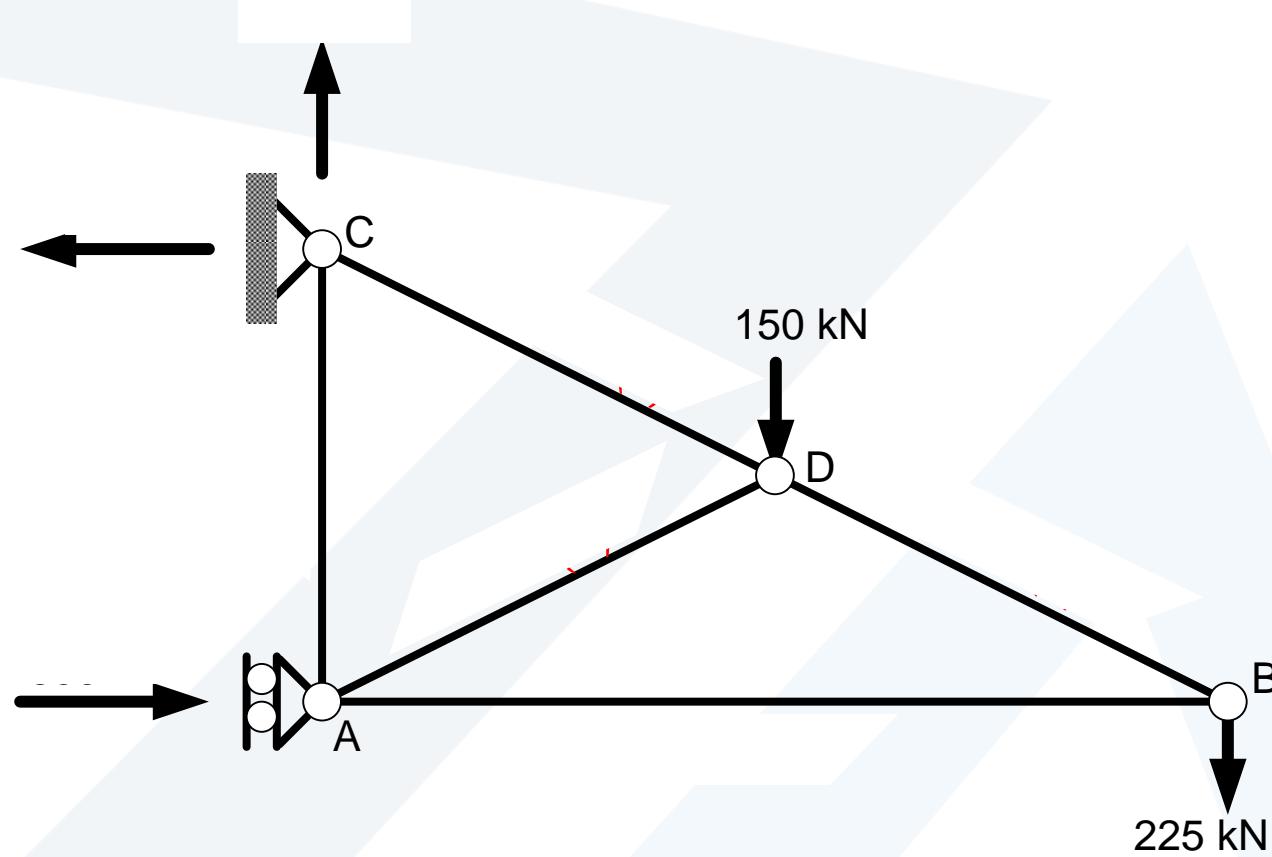

**Example 03:** Use the virtual work method to determine the horizontal and vertical components of the deflection at joint B of the truss shown in the following figure. **Then find the vertical deflection at D without V.U.L.**

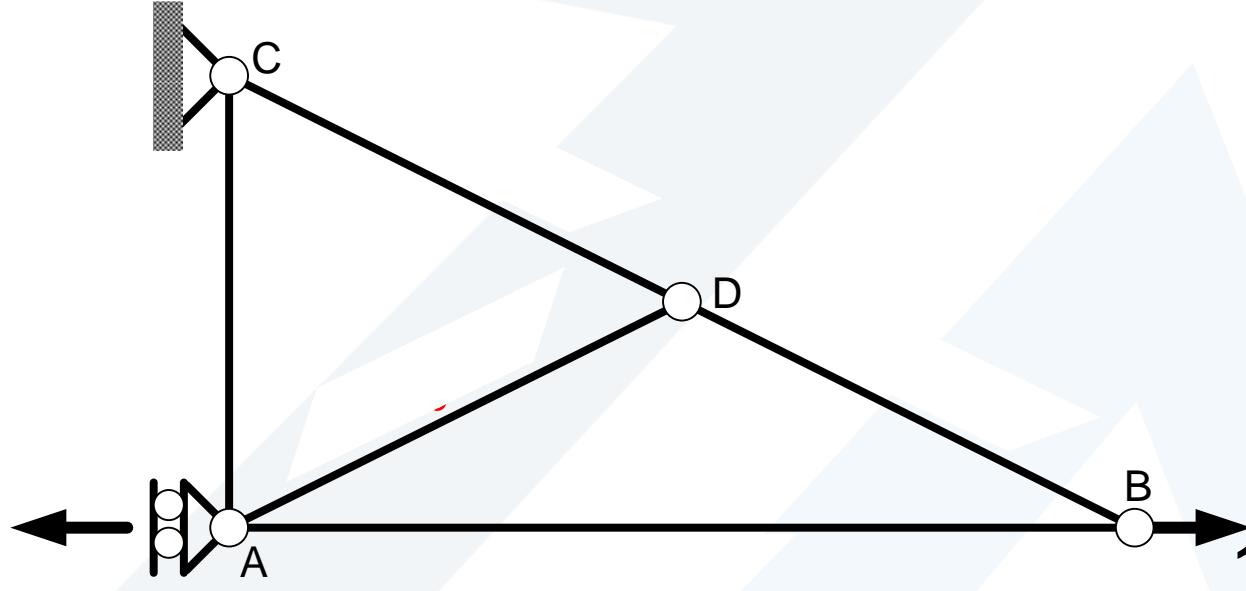

### Example 03: Horizontal Deflection at B, $\Delta_{BH}$

**Real System** The real system and the corresponding member axial forces (N) are shown in the following figure.

**Example 03: Virtual System Horizontal Deflection at B,  $\Delta_{BH}$** : The virtual system used for determining the horizontal deflection at B consists of a 1-kN load applied in the horizontal direction at joint B, as shown in the following fig. The member axial forces ( $N_{v1}$ ) due to this virtual load are also shown in this figure.

**Example 03:** The member axial forces due to the real system ( $N$ ) and this virtual system ( $N_{v1}$ ) are then tabulated as shown in the following table:

| Member | L<br>(m) | A<br>(m <sup>2</sup> ) | N<br>(kN) | N <sub>v1</sub><br>(kN) | N <sub>v1</sub> (NL/A)<br>(kn <sup>2</sup> /m) |
|--------|----------|------------------------|-----------|-------------------------|--|
| AB     | 6        | 0.0040                 | -450      | 1                       | -675.000                                       |
| AC     | 3        | 0.0026                 | 75        | 0                       | 0  |
| AD     | 3.354    | 0.0026                 | -167.7    | 0                       | 0  |
| CD     | 3.354    | 0.0040                 | 670.8     | 0                       | 0  |
| BD     | 3.354    | 0.0040                 | 503.1     | 0                       | 0  |
|        |          |                        |           |                         | <b>-675.000</b>                                |

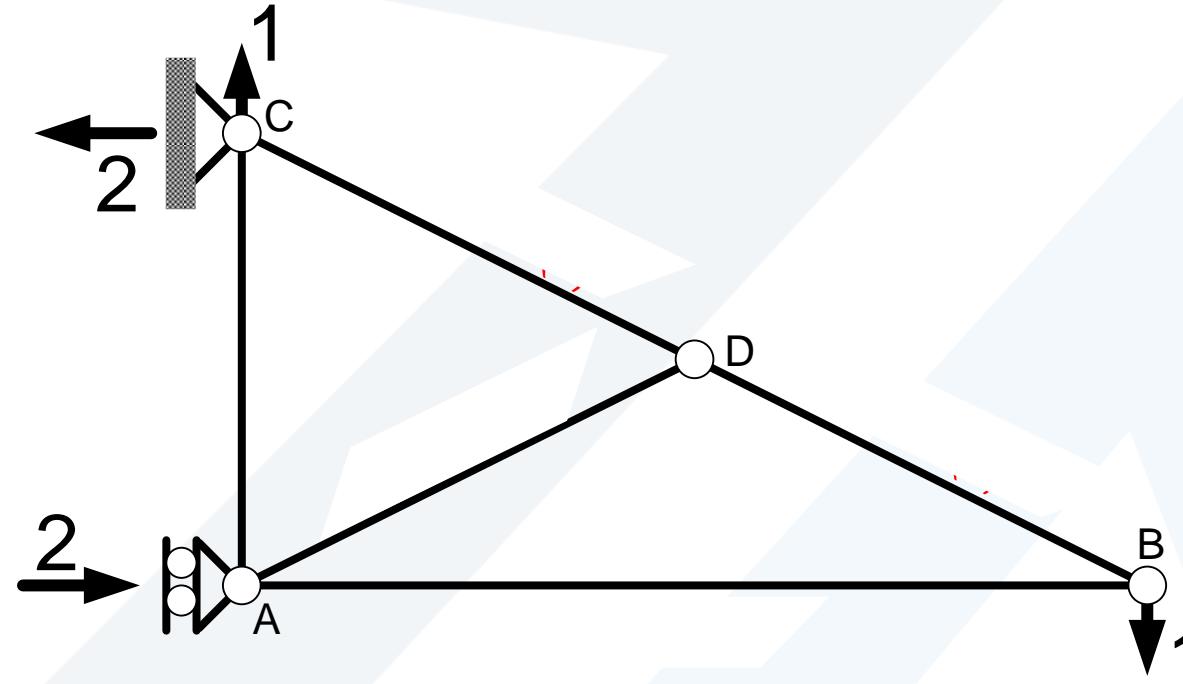

**Example 03:** the virtual work expression is applied to determine  $\Delta_{BH}$  as shown below:

$$1(\Delta_{BH}) = \frac{1}{E} \sum \frac{N_{v1}(NL)}{A}$$

$$(1)(\Delta_{BH}) = -\frac{675,000 \text{ kN.m}}{70(10^6) \text{ kN-m}} = -0.00964 \text{ m}$$

$$\Delta_{BH} = 9.64 \text{ mm} \leftarrow$$

**Example 03: Virtual System Vertical Deflection at B,  $\Delta_{BV}$** : The virtual system used for determining the vertical deflection at B consists of a 1-kN load applied in the vertical direction at joint B, as shown in the following fig. The member axial forces ( $N_{v2}$ ) due to this virtual load are also shown in this figure.

**Example 03:** The member axial forces due to the real system ( $N$ ) and this virtual system ( $N_{v2}$ ) are then tabulated as shown in the following table:

| Member | L<br>(m) | A<br>(m <sup>2</sup> ) | N<br>(kN) | $N_{v2}$<br>(kN) | $N_{v2}(NL/A)$<br>(kn <sup>2</sup> /m) |
|--------|----------|------------------------|-----------|------------------|--|
| AB     | 6        | 0.0040                 | -450      | -2               | 1,350,000                              |
| AC     | 3        | 0.0026                 | 75        | 0                | 0                                      |
| AD     | 3.354    | 0.0026                 | -167.7    | 0                | 0                                      |
| CD     | 3.354    | 0.0040                 | 670.8     | 2.236            | 1,257,674                              |
| BD     | 3.354    | 0.0040                 | 503.1     | 2.236            | 943,255                                |
|        |          |                        |           | $\Sigma$         | <b>3,550,929</b>                       |

**Example 03:** the virtual work expression is applied to determine  $\Delta_{BV}$  as shown below:

$$1(\Delta_{BV}) = \frac{1}{E} \sum \frac{N_{v2}(NL)}{A}$$

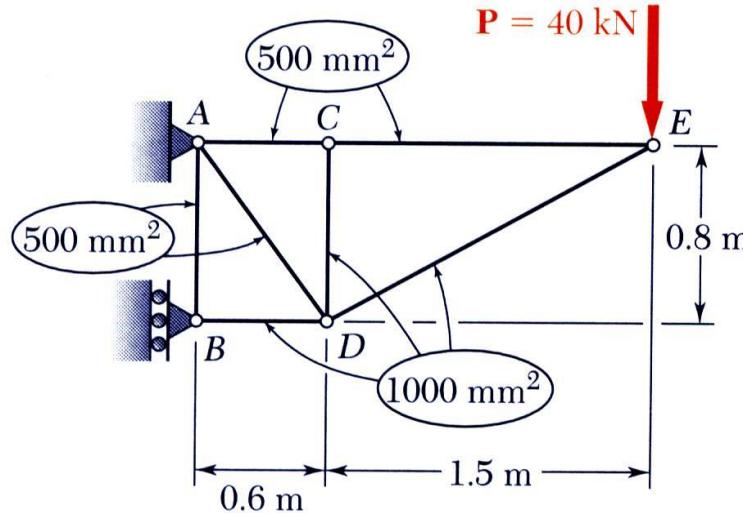

$$(1)(\Delta_{BV}) = \frac{3,550,929 \text{ kN.m}}{70(10^6) \text{ kN-m}} = 0.05073 \text{ m}$$

$$\Delta_{BV} = 50.73 \text{ mm} \downarrow$$

## Example 04:

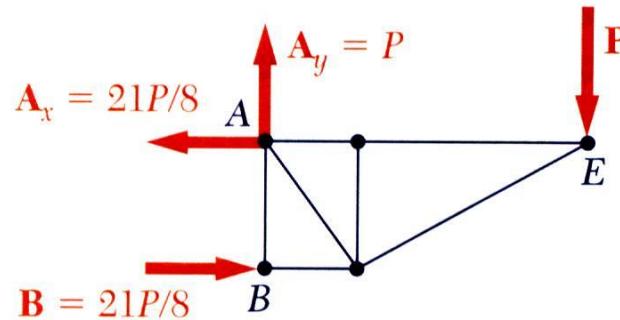

Members of the truss shown consist of sections of aluminum pipe with the cross-sectional areas indicated.

Using  $E = 73 \text{ GPa}$ , determine the vertical deflection of the point  $E$  caused by the load  $P$ .

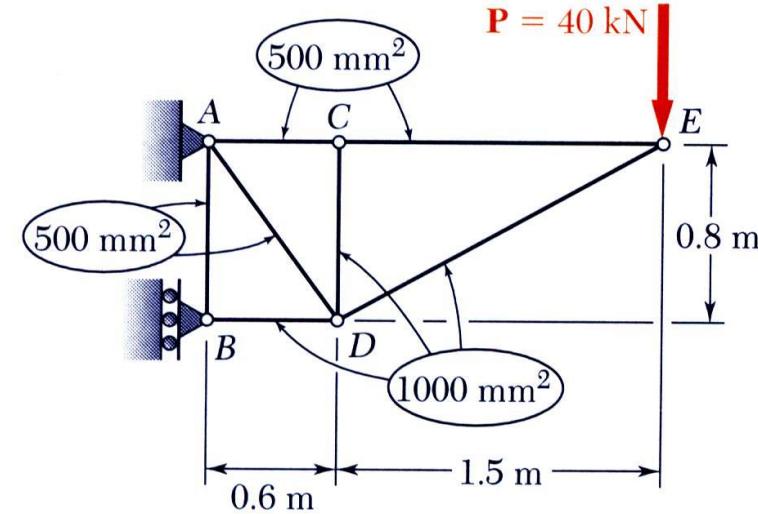

Members of the truss shown consist of sections of aluminum pipe with the cross-sectional areas indicated.

Using  $E = 73 \text{ GPa}$ , determine the vertical deflection of the point  $E$  caused by the load  $P$ .

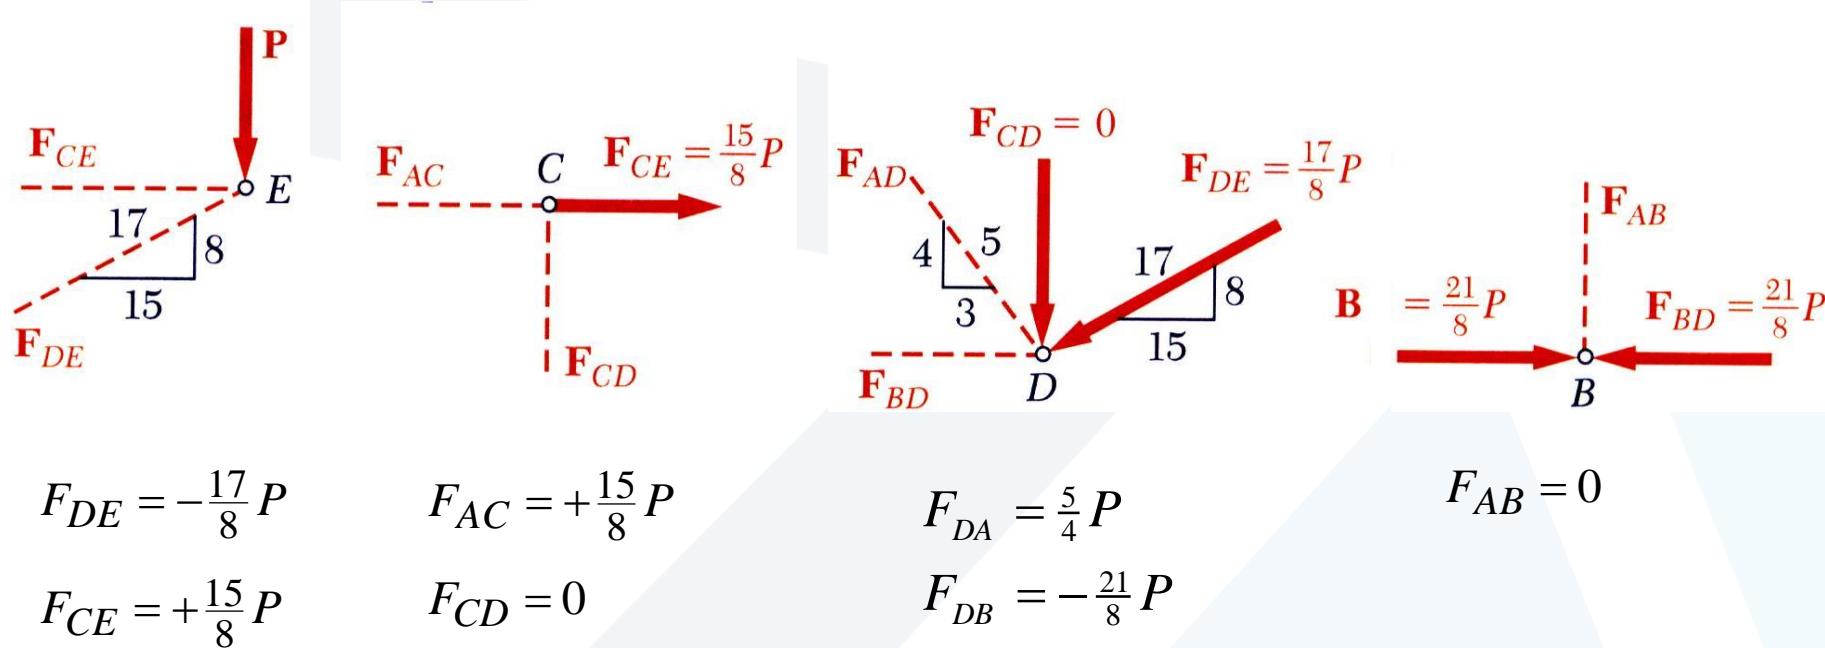

# Solution

- Find the reactions at A and B from a free-body diagram of the entire truss.

$$A_x = -21P/8 \quad A_y = P \quad B_x = 21P/8$$

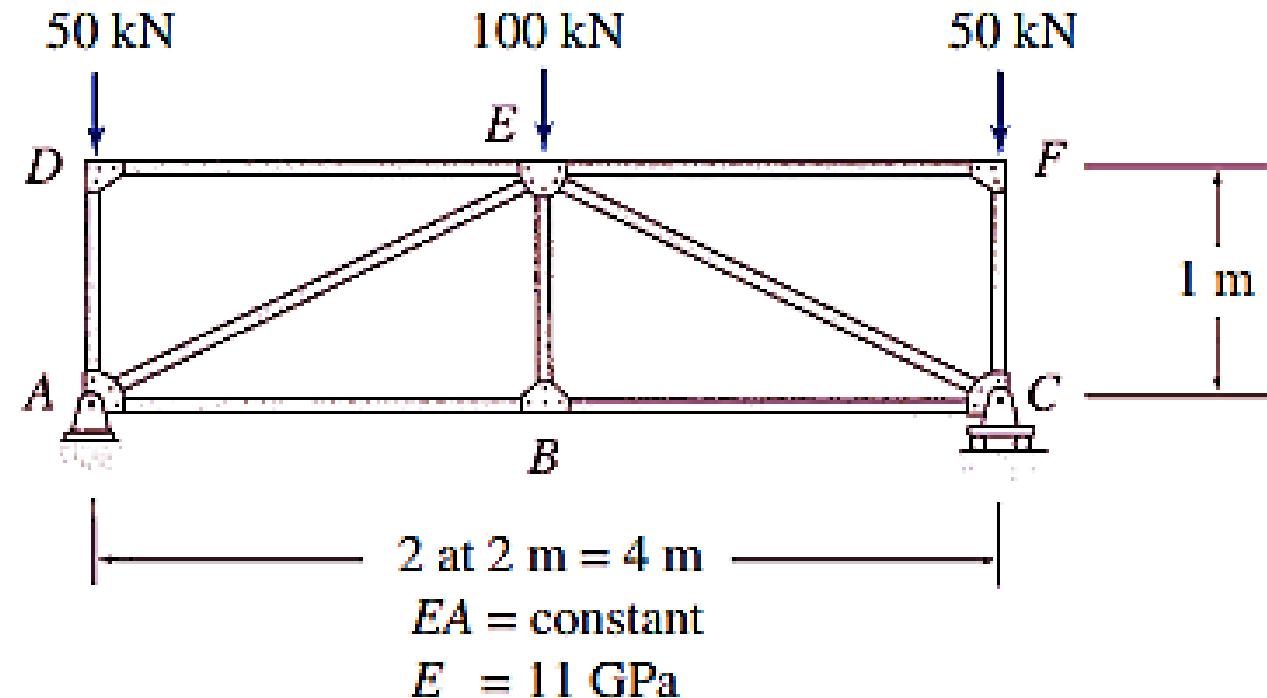

- Apply the method of joints to determine the axial force in each member.

$$(\frac{1}{2})P v_E = \sum (N_i^2 L_i / 2E_i A_i) \Rightarrow v_E \cong 16.27 \text{ mm} \downarrow$$

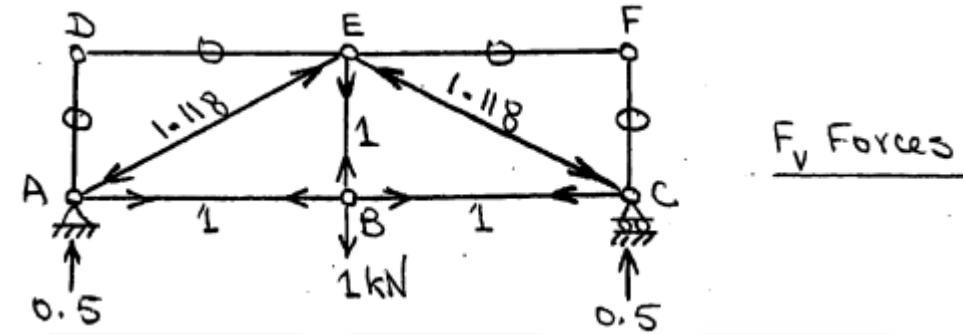

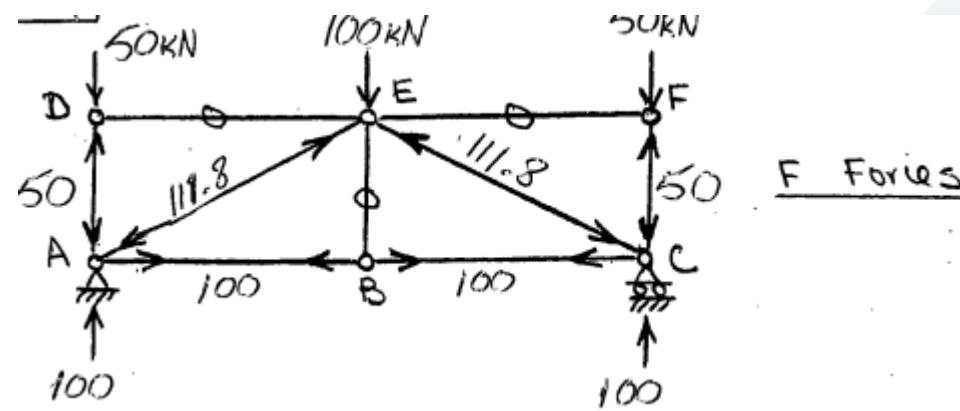

## Example 05:

Determine the smallest cross-sectional area ( $A$ ) required for the members of the truss shown, so that the vertical deflection at joint (B) does not exceed 10 mm. Use the virtual work method.

## Example 05:

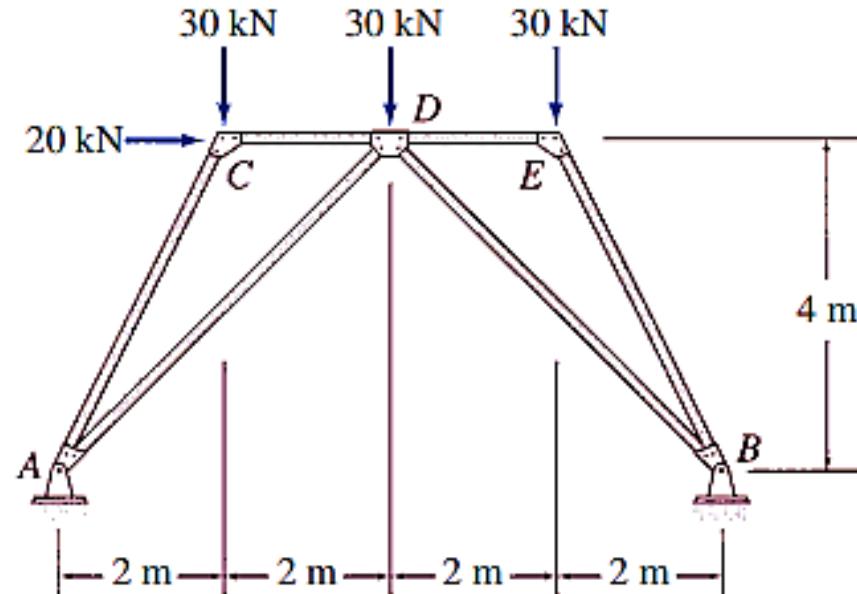

Determine the smallest cross-sectional area ( $A$ ) required for the members of the truss shown, so that the vertical deflection at joint (B) does not exceed 10 mm. Use the virtual work method.

$$\begin{aligned}
 A &= \frac{0.0008 \text{ m}^2}{800 \text{ mm}^2} \\
 &= \underline{\underline{800 \text{ mm}^2}}
 \end{aligned}$$

# Homework

**Problem.02:** Use the virtual work method to determine the horizontal deflection at joint (E) of the truss shown.

$$EA = \text{constant}$$

$$E = 200 \text{ GPa}$$

$$A = 5000 \text{ mm}^2$$
