Deflection in Determinate Structures

Deflections of Trusses, Beams, & Frames: Work-Energy Methods
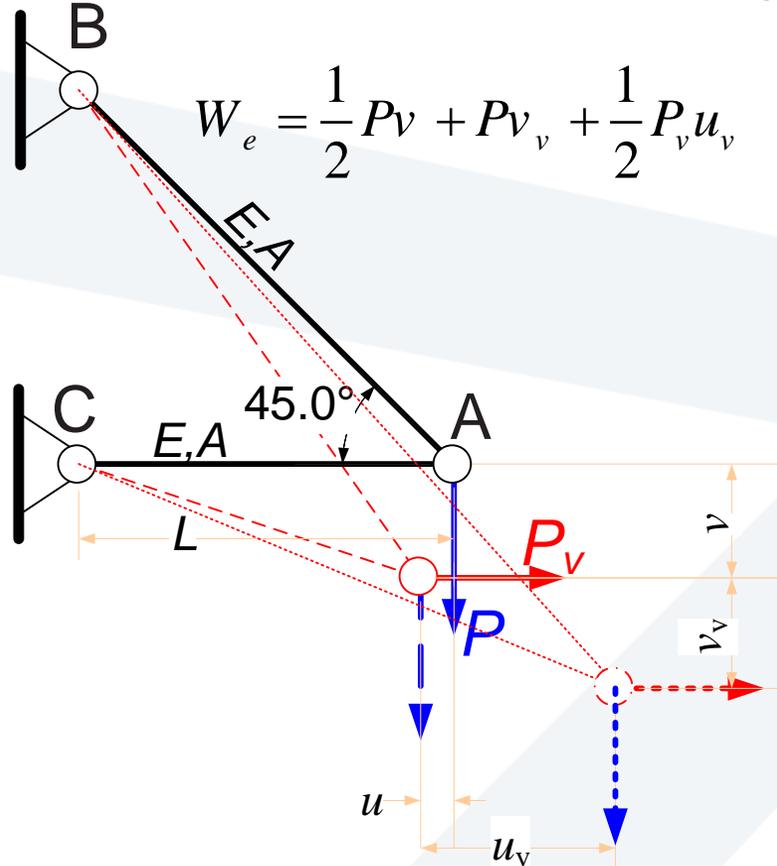

- Deflection of trusses by Work & Strain energy principle

- Principle of Virtual Work

- Deflections of Trusses by the V. W. M.

- Deflections of Beams by the V. W. M.

- Deflections of Frames by the V. W. M.
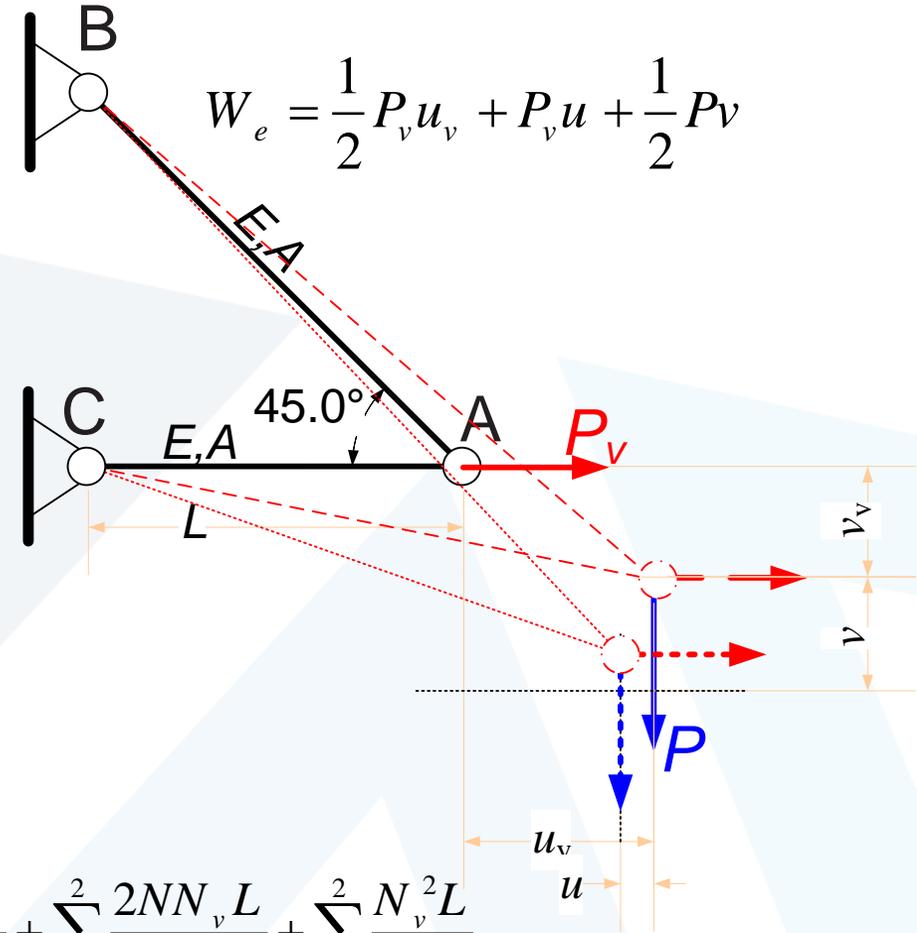

Deflections of Trusses by the Virtual Work Method

$$W_e = \frac{1}{2}Pv + Pv_v + \frac{1}{2}P_v u_v$$

$$W_e = \frac{1}{2}P_v u_v + P_v u + \frac{1}{2}Pv$$

$$U = \sum_{i=1}^{2}\frac{(N+N_v)^2 L}{2EA} = \sum_{i=1}^{2}\frac{N^2 L}{2EA} + \sum_{i=1}^{2}\frac{2NN_v L}{2EA} + \sum_{i=1}^{2}\frac{N_v^2 L}{2EA}$$

$$W_e = U \Rightarrow Pv_v = P_v u = \sum_{i=1}^{2}\frac{NN_v L}{EA}$$
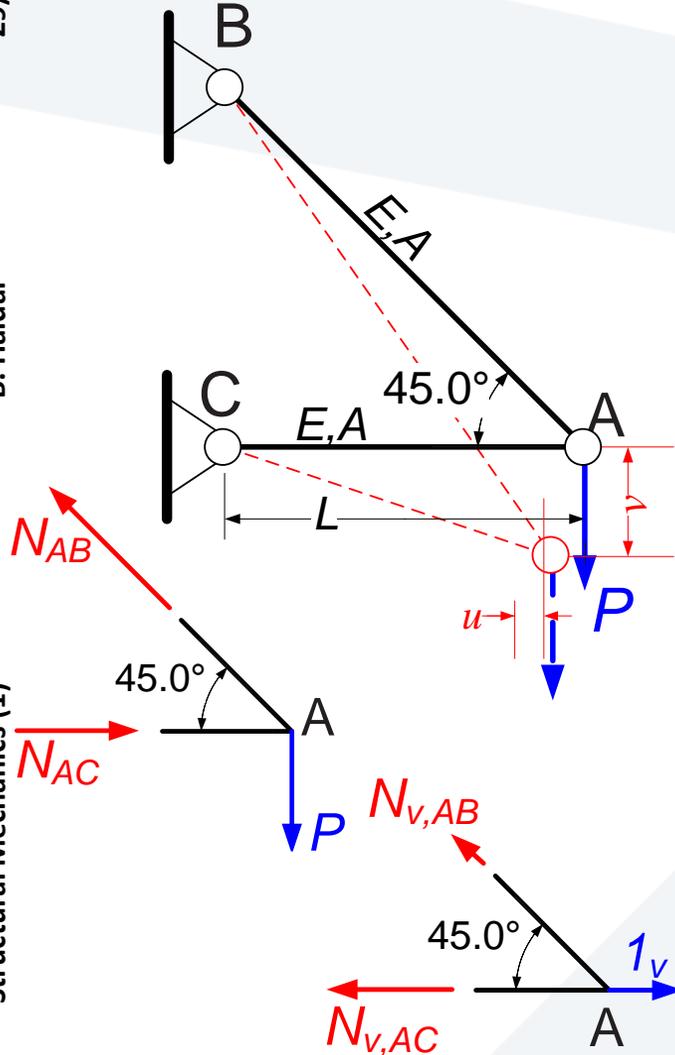

Making $P_v = 1$

$$(1_v)u = u = \sum_{i=1}^{2}\frac{NN_v L}{EA}$$

The truss shown in Fig. carries a gradually applied load P at the joint A. **Compute the horizontal deflection u at A.**

B

E,A

C E,A 45.0°   A

L

u →| P

N_{AB}

45.0°   A

N_{AC}

P $N_{v,AB}$

45.0° 1_v

$N_{v,AC}$ A

1) Analyzing the truss under the real load, for N in the two members. We found

$$N_{AB}=1.41P\,(\text{T}) \qquad N_{AC}=P\,(\text{C})$$

2) Applying a virtual unit load at A in the direction of u. Then Analyzing For N_v

Considering the vertical equil. at A:

$$N_{v,AB}\cos 45^{\circ}= 0 \Longrightarrow N_{v,AB}=0$$

Considering the horizontal equil. at A:

$$-N_{v,AC} + 1_v= 0 \Longrightarrow N_{v,AC}=1\,(\text{T})$$

3) Applying the V.W.M $\quad (1_v)u = u = \displaystyle\sum_{i=1}^{2} \frac{N N_v L}{EA} = 0 + \frac{(-P)(+1)L}{EA} = \frac{-PL}{EA}$

Example 01: Use the virtual work method to determine the horizontal components of the deflection at joint C of the truss shown in the following figure.

EA = constant
E = 70 GPa
A = 40 cm^2

Real System — F Forces

) Virtual System — F_v Forces

Example 01: The member axial forces due to the real system (N) and this virtual system (N_{v1}) are then tabulated as shown in the following table:.

| Member	L (m)	N (kN)	N_v (kN)	$N_v(NL)$ ($kn^2.m$)
AB	1.2	-187.5	-1.25	281.25
AC	4.5	312.5	3.75	5273.44
BC	3.9	-487.5	-3.25	6179.06
				11733.75

Example 01: the virtual work expression is applied to determine Δ_{CH} as shown below:

$$1(\Delta_{CH}) = \frac{1}{E} \sum \frac{N_v(NL)}{A}$$

$$(1\text{kN})(\Delta_{CH}) = \frac{11,733.75}{70(10^6)4000(10^{-6})} \text{kN.m}$$

$$\Delta_{CH} = 0.042 \text{ m}$$

$$\Delta_{CH} = 42\ mm\ \rightarrow$$

Example 02: Use the virtual work method to determine the horizontal components of the deflection at joint G of the truss shown in the following figure.

$E = 200$ GPa

(b) Real System — F Forces

(c) Virtual System — F_v Forces

Slide 8

Example 02: The member axial forces due to the real system (N) and this virtual system (N_{v1}) are then tabulated as shown in the following table:

Member	L (m)	A (m²)	N (kN)	N_v (kN)	N_{v1}(NL/A) (kn²/m)
AB	4	0.003	300	1	400000
CD	4	0.002	0	0	0
EG	4	0.002	-100	0	0
AC	3	0.003	300	1.5	450000
CE	3	0.003	0	0	0
BD	3	0.003	-75	-0.75	56250
DG	3	0.003	-75	-0.75	56250
BC	5	0.002	-375	-1.25	1171875
CG	5	0.002	125	1.25	390625
					2525000

Example 02: the virtual work expression is applied to determine Δ_{GH} as shown below:

$$1(\Delta_{GH}) = \frac{1}{E} \sum \frac{N_v(NL)}{A}$$

$$(1\ kN)(\Delta_{CH}) = \frac{2525000}{200(10^6)}\ kN.m$$

$$\Delta_{GH} = 0.0126\ m$$

$$\Delta_{GH} = 12.6\ mm\ \rightarrow$$

Example 03: Use the virtual work method to determine the horizontal and vertical components of the deflection at joint B of the truss shown in the following figure. **Then find the vertical deflection at D without V.U.L.**
